Change Type	Schema Impacting

Detail of Request

Background

In late 2007, the CRU, working closely with the Department of Communications, Energy and Natural Resources (DCENR), established the National Smart Metering Programme (NSMP). In Phase 1, a trial was carried out in order to assess the costs and benefits of smart meters and to inform decisions relating to the full rollout. In July 2012, a decision was announced to rollout electricity and gas smart meters for all residential and small and medium sized businesses. Phase 2 commenced in January 2013 and broadly composed of a high-level design and procurement phase. [CER14046].

The Smart Metering High Level Design Decision Paper published in October 2014 outlines the decisions with regard to the high level design stage within Phase 2 with regards to 1) Core Design, 2) Time of Use Tariffs, 3) Presentation of Energy Usage information to consumers and 4) Pay As You Go (PAYG) solution.

The original NSMP Programme plan envisaged a "big bang" delivery of all NSMP functionality for electricity, gas and inhome data Smart services, with an estimated delivery date in 2023. In early 2017 ESBN submitted a revised proposal to the NSMP to CRU, outlining a phased approach to the delivery of Smart Metering and the NSMP High Level Design (HLD). The proposal foresees delivery over three distinct phases. This Phased Approach proposal has been positively received by CRU and Energy Suppliers and now forms the basis of ESBNs plans and assumptions in respect of the NSMP. The CRU approval of the phased approach was publicly announced in September 2017.

Phase 1 was completed in March 2021 and delivered the installation of 250,000 Smart Electricity Meters. With the Market Schema Release delivered as part of this phase, all system, business and market changes were completed to allow 30-minute interval data to flow to Suppliers via the Market Systems and for Interval Data to be used in all market processes including DUoS Billing and Market Settlement Aggregation.

Phase 2 will deliver the installation of an additional 1 million Smart Electricity Meters by the end of September 2023. With the Market Schema Release at the end of September 2023, all retail market use cases requiring remote and local operation of the service switch in Smart Electricity Meters will be enabled. Smart Pre-Payment services with remote deenergisation/energisation can begin after this phase.

Phase 3 will deliver the installation of an additional 1 million+ Smart Electricity Meters by September 2025. Along with the Market Schema Release in September 2025, Gas Smart Metering Services and In-Home Data Services will be enabled.

30/03/2022	Page 1 of 5	Discussion Request1216

NSMP Programme has implemented Phase 1 and Phase 2 has commenced. It is within this 2nd phase that the Smart Metering Remote Operations activity has commenced.

This DR provides details of the Retail Market Design changes associated with Smart Metering Remote Operations.

Proposed Solution

This details the changes required to the Retail Market Design to enable the utilisation of the Remote Switch functionality of the Smart Meter.

This contains the offering of a Remote Switch capability in the following scenarios:

- De-Energise Non NPA
- De-energise NPA
- De-Energise PAYG
- Re-Energise Non NPA
- Re-energise NPA
- Re-Energise PAYG

The PAYG requests will be enabled as part of the market release, the functionality for non-NPA and NPA will be built as part of this release, and CRU direction will indicate its enablement.

Changes to Market Messages, Data Items, Data Definitions and Data Codes are contained in the linked amended Design Documents (with track changes).

De-Energisation Non NPA and NPA

For Single Phase sites with a CTF level of 4, these will be carried out remotely, a site visit will be initiated where CTF <4 and a site visit will be initiated where intermittent comms prevent the operation of the remote switch.

De-Energise PAYG

For Single Phase MCC12 sites with a CTF level of 4, these will be carried out remotely and a rejection will be issued where intermittent coms prevent the operation of the remote switch.

Re-Energise Non NPA, Re-energise NPA, Re-Energise PAYG

Where a site has been de-energised remotely these requests will be carried out remotely, and a site visit will be initiated where intermittent coms prevent the operation of the remote switch

Requests received outside of the allowable de-energisation period will be rejected unless the required data provided is within the de-energisation period, De-energisation period as defined in the De-Energisation code of Practice, PAYG Consultation and the Electricity and Gas Suppliers Handbook.

As Per CRU Smart Metering Phase 2 Scope currently for Non-Interval sites a de-energisation and re-energisation confirmation cannot be carried out on the same day. The following change will allow Suppliers to be informed where a De-energisation and Re-energisation occurs on the same day.

MM106D and MM106E changes

These will be sent for all Non-Interval sites as well (unmetered will remain as is) where there is a de-energisation or re-energisation

Non Interval same day De-energisation and Re-energisation

Where a De-energisation and Re-energisation are carried out on the same day, the MM306 won't be sent and the MM307 will be sent as normal

Issuing of MM307W

Where a change from a Non-Interval MCC is carried out on the same day or the day after a Re-energisation the MM307W is issued.

PAYG during CoS window

PAYG De-energisation/Re-energisation requests will be allowed during the CoS window.

The Prioritisation process for the V14.00.00 Schema Release, due to take place in September 2023, will indicate which MCR's are due to be implemented.
