

MCR	1122	Introduction of Flag into the Market Design to identify Sites with Essential Plant	Priority High
Harmonisation Status		CLOSED - Approved	CR Status Approved
		Status Date	13/02/2013
Date	Version	Reason For Change	Version Status
12/09/2012	v2.0	Issued to Market for Approval at HWG on 19/09/2012 Includes updated Definition of Essential Plant to remove "Security Systems" & to include Fire-Fighting Equipment/Access for Fire Brigade etc.	Final
06/02/2013	v3.0	Amended to reflect changes requested by ESBN. 106D Meter Point Status Confirmation DeEnergisation and 106E Meter Point Status Confirmation Energisation added. Also to include a statement that "The EssentialPlantFlag will be at MPRN level within the messages".	Final

PART 1 DETAIL OF DISCUSSION REQUEST/MARKET CHANGE REQUEST:

Requesting Organisation(s)	ESB Networks	Originating Jurisdiction	RoI
Contact name	Kieran Finucane		
Date Request Raised	21/05/2012	Originating Request	DR 1122
Detail of Request			
Reason for Request			
The traditional practice of ESBN has been not to de-energise essential plant where Health & Safety issues may arise. Essential Plant includes but not limited to: • Water Pumping/Treatment Systems, Fire Fighting Equipment incl. Alarms, Pumps, etc. • Fire Fighting Equipment incl. Alarms, Pumps, Access gates for Fire Brigade etc. • Sewage systems • Lighting/lifts in indoor/outdoor common areas of apartment blocks/private developments • The electricity used is not for personal use and the tariff applicable is a business tariff. This DR seeks to introduce a new flag to allow for an MPRN to be identified in the Central Market System as Essential Plant. DSO will maintain this flag. This flag is valid for relevant Unmetered DG3/DG4 at a TMRN level and Business DG5 and higher. The content of the flag will be made available to Suppliers and TSO on the Extranet and the downloadable meter point details file as well as certain messages that are indicated in detail in the following section.			
Proposed Solution			
Data Definition A new flag is proposed to be added to the Harmonised Data Definitions with the name Essential Plant Flag and schema name EssentialPlantFlag. The Harmonised Data Definition for Essential Plant Flag is "As and where an MPRN is determined to be Essential Plant, or where Essential Plant flag has been removed, then this flag will be highlighted." This flag will be a new Boolean Flag. Where the flag appears with a value of 1 it will mean that there is essential plant at this MPRN, and in the exceptional case where this flag appears with a value of 0 this would mean that there is not essential plant at this MPRN. Market Messages It is proposed to add a new optional EssentialPlantFlag field to the following Market Messages 101 New Connection Registration Acceptance 101P New Connection Provisional Acceptance 102 Change of Supply Registration Acceptance 102P Change of Supplier Provisional Acceptance 301 Meter Point Characteristics 105 Change of Supplier Confirmation 106D Meter Point Status Confirmation DeEnergisation 106E Meter Point Status Confirmation Energisation 306, 306W Meter Point Status Change Confirmation DeEnergisation, and Withdrawal 307, 307W Meter Point Status Change Confirmation Energisation, and Withdrawal 331 Interval Meter Technical Details 332, 332W Non Interval Meter Technical Details, and Withdrawal 700, 700W Unmetered Characteristics, and Withdrawal This field is proposed to be populated only where it has been determined that there is essential plant at the MPRN. The EssentialPlantFlag will be at MPRN level within the messages.			

MCR	1122 Introduction of Flag into the Market Design to identify Sites with Essential Plant Priority High
With regard to Unmetered Change of Supplier Confirmation, for Grouped Unmetered the 700MM is the relevant message whereas for Single Point Unmetered it is the 105MM, as is the current market design. Where ESB Networks determine that there is a change at an MPRN which affects the value of this flag, then this will be notified on the 301MM. A value of 0 will be sent where a site is no longer essential plant. The flag will be removed from the MPRN. Where a site is becoming essential plant, a value of 1 will be sent and applied to the MPRN. The exception is for Grouped Unmetered MPRNs where the 700 MM Unmetered Characteristics is in play and not the 301MM. Extranet, Downloadable Meter Point Details File The content of the flag will be made available to Suppliers on the Extranet and the Downloadable Meter Point Details file. On the Downloadable Meter Point Details files this field will be made available in the Commercial and Unmetered extracts and directly after the MIC field. Where this flag appears with a value of 1 on the Extranet or the Downloadable Meter Point Details file it will mean that there is essential plant at this MPRN. It is not proposed to populate a value of 0 on the Extranet for MPRNs that are not flagged as Essential Plant Comment: the exact location of the new field on the Extranet will be communicated throughout the implementation phase.
