24/10/06 Version 1.0 SEM MCR Issued
15/11/06 Version 1.1 SEM MCR Issued

Identification of Retail Market Design Baseline Products Impacted

Identification of Retail Market Design Baseline Products Impacted

Reason for Working Practice

The retail market has existing data definitions and values for the Supplier ID and Generator IDs however the Single Electricity is introducing different definitions and values. The consequences of this are as follows:

Supplier ID

Field length

The ROI Retail Market has a 3 long data field containing the Supplier ID. In the SEM, the equivalent data field will be longer.

Field Values

The values of the Supplier IDs are changing in the SEM.

- The ROI Retail Market will retain the current Supplier IDs and put in place a mapping table to the new SEM Participant ID

- For new Suppliers post go-live, the ROI Retail Market will allocate a 3 digit Supplier Identifier in the Sxx series for use in the ROI Retail Market

Generator ID

Field length

The ROI Retail Market has a 3 long data field containing the Generator ID. In the SEM, the equivalent data field will be longer.

Field Values

The values of the Generator IDs are changing in the SEM.

- the proposal is to retain in the ROI Retail Market the current Generator IDs and to put in place a mapping table to the new SEM Participant ID

- For new Generators post go-live, the ROI Retail Market will allocate a 3 digit Generator Identifier in the Gxx series for use in the ROI Retail Market

Working Practice

Whenever the SMO notifies MRSO of a new Supplier or Generator ID the following process will be followed.

Supplier ID

Can be triggered by the receipt of Wholesale Market Registration information from the SMO.

Assuming the Supplier has undertaken and passed the relevant Market Assurance Testing this trigger will result in MRSO:
- Assigning a 3 digit SXX Supplier ID for the Retail Market
- Updating the mapping into systems
- Contacting the Supplier to confirm the new value for use in the Retail Market
- Contacting the TSO to confirm the new value for use in the Retail Market

Note: these communications will be via manual emails.

Generator ID

Can be triggered by the receipt of Wholesale Market Registration information from the SMO.

Assuming the Generator has undertaken and passed the relevant Market Assurance Testing this trigger will result in MRSO:
- Assigning a 3 digit Generator ID for the Retail Market
- Updating the mapping into systems
- Contacting the Generator to confirm the new value for use in the Retail Market
- Contacting the TSO to confirm the new value for use in the Retail Market

Note: these communications will be via manual emails.
